

A success story that starts by talking about what we don't do.

At ABL, it's not just about what we make. It's also about what we try not to make. And that's waste. It's our commitment to sustainability that's driven us to make better, more efficient machines. Machines that reduce waste and increase yield. All to make your business and our planet healthier.

15% Less Waste

That means ABL machines get more usable product out of each piece of fruit or vegetable. To put that into numbers, for every 1 billion kg of fruit, 150,000,000 kg of less waste will be produced every year.

Reduced CO₂

Less waste also means fewer trucks needed to haul it. Up to 4,000 fewer trucks every year to be accurate. And fewer trucks mean lower emissions and a healthier environment.

Feeding More People

Less waste also means more food. In fact, if the 150,000,000kg/year of reduced waste was donated, and 2kg/day were given to people who don't have access to food we could feed 75 million people.

ABLTM

**Less waste, fewer trucks, means better results
for your business and our planet.**
