

**ABI**

**AP15 Butternut** | Butternut squash Peeler

**Ripe for Success.**

## How it works:

Designed for Butternut Squash, AP15 Peeler deliver completely peeled produce including removal of top and tail .

One operator requested to feed the product into the machine at a speed of 12 piece /minute.

The peeling head is specifically designed to follow the shape of butternuts and allow to obtain high yield rate, up to 75%.

Top and tail removal designed to remove the external portions according to the size of each piece without adjustment.

The whole peeled product will be discharged onto a lower conveyor where deseeding will be manually performed.

AP15 can also be Integrated with ABL's chunking & slicing system if requested.

## Features and benefits:

- Processes up to 12 pieces/minute
- The peeling group is specifically designed for the shape of the butternut squash
- High yield rate: up to 75% product yield.
- Reliable and robust performance for industrial and non-industrial processes
- Maximizes productivity while reducing production costs

## Performance and support:

Every ABL machine is engineered to set new standards for performance and efficiency. From operator safety and process automation to contamination control and fruit-quality safeguarding, our machines are designed to improve the elements that matter most to our customers.

ABL also offers ongoing training to help owners maximize machine performance – from start-up throughout the machine's entire life span. Training sessions are periodically organized and can also be held at ABL headquarters.
