

ABITM

**MP90
MP45**

| High Speed Mango Peeler

Ripe for Success.

How it works:

MP90 is a semiautomatic peeling machine for Mango. The machine is available on the market in two models, MP45 and MP90, which process 45 and 90 mangos per minute. The machine can be used to peel one to two Mango varieties at a time as the machine is equipped by multiple peeling heads. A self-centering hand centers and transfers the fruit between two mandrels, where they are placed in rotation for peeling.

The ABL patented peeling head gently follows the fruit shape according to its dimension with the possibility to adjust the peeling depth. After, the peeled fruit is discharged onto a belt conveyor separately from the skin to avoid cross-contamination.

Features and benefits:

- Depending on model will process as follow
 - MP45 Processes up to 45 pieces/minute
 - MP90 Processes up to 90 pieces/minute
- Adjustable peeling depth.
- Self-adjusts for different fruit shapes and dimension
- High yield rate
- Reliable and robust performance for industrial and non-industrial processes
- Maximizes productivity while reducing production costs

Performance and support:

Every ABL machine is engineered to set new standards for performance and efficiency. From operator safety and process automation to contamination control and fruit-quality safeguarding, our machines are designed to improve the elements that matter most to our customers.

ABL also offers ongoing training to help owners maximize machine performance – from start-up throughout the machine's entire life span. Training sessions are periodically organized and can also be held at ABL headquarters.
