

ABI™

SP50-100 | Apples & Nectarines Slicer

Ripe for Success.

How it works:

Designed for Apple and Nectarines, this coring and slicing machines is capable to processing from 50 to 100 fruits per minute depending on the chosen machine.

When processing apples the system could be totally automatic (feeding, orienting , slicing) while it has to be manually feed when processing nectarine peaches.

The ABL SP machine is designed and engineered to minimize the common issue related to the apple slicing such as slices broken edge or translucency on apple's slice, allowing processor to realize a very high quality looking apple's slice.

Performance and support:

Every ABL machine is engineered to set new standards for performance and efficiency. From operator safety and process automation to contamination control and fruit-quality safeguarding, our machines are designed to improve the elements that matter most to our customers.

ABL also offers ongoing training to help owners maximize machine performance – from start-up throughout the machine's entire life span. Training sessions are periodically organized and can also be held at ABL headquarters.

Features and benefits:

- Available in 50 or 100 fruit/minute
- High yield rate: up to 75% and more
- Reliable and robust performance for industrial and non-industrial processes
- Maximizes productivity while reducing production costs

Rev.01 (09-2021)
