SPP100 | Tomatoes Slicer

Ripe for Success.

How it works:

Designed for Tomatoes Globe variety.

This Slicing machine is capable of processing up to 100 fruits per minute.

The system which is totally automatic (feeding, orienting and slicing) could also be delivered in a semi-automatic mode, which will require one person to infeed.

Machine is completely built in stainless steel and other antioxidant materials to allow easy sanitation and it comply to all the international safety standard and rules.

When operating in automatic mode no operators are needed to run the machine.

Number of slices to be chosen depending on customer spec's, quick changeover of the slicing head.

Performance and support:

Every ABL machine is engineered to set new standards for performance and efficiency. From operator safety and process automation to contamination control and fruit-quality safeguarding, our machines are designed to improve the elements that matter most to our customers.

ABL also offers ongoing training to help owners maximize machine performance – from start-up throughout the machine's entire life span. Training sessions are periodically organized and can also be held at ABL headquarters.

Features and benefits:

- Available in 50-100 fruit/minute
- Automatic salting system
- Reliable and robust performance for industrial and non-industrial processes
- Maximizes productivity while reducing production costs

Rev.00 (09-2021)
